Strategic Materials Policy Tracker

Reading a financing package: commitments, drawdowns and operations

Design validation deck: five slides built from the SMPT starter template

Version 3.0 · 11 November 2026 · Draft. Unpublished design validation. Synthetic example data, not research.

State the answer before the evidence

Executive answer: one governing judgment and three supporting facts

Programme Gamma holds the largest committed balance.

640

Gamma committed, CU million

36.6%

Gamma share of 1,750 total

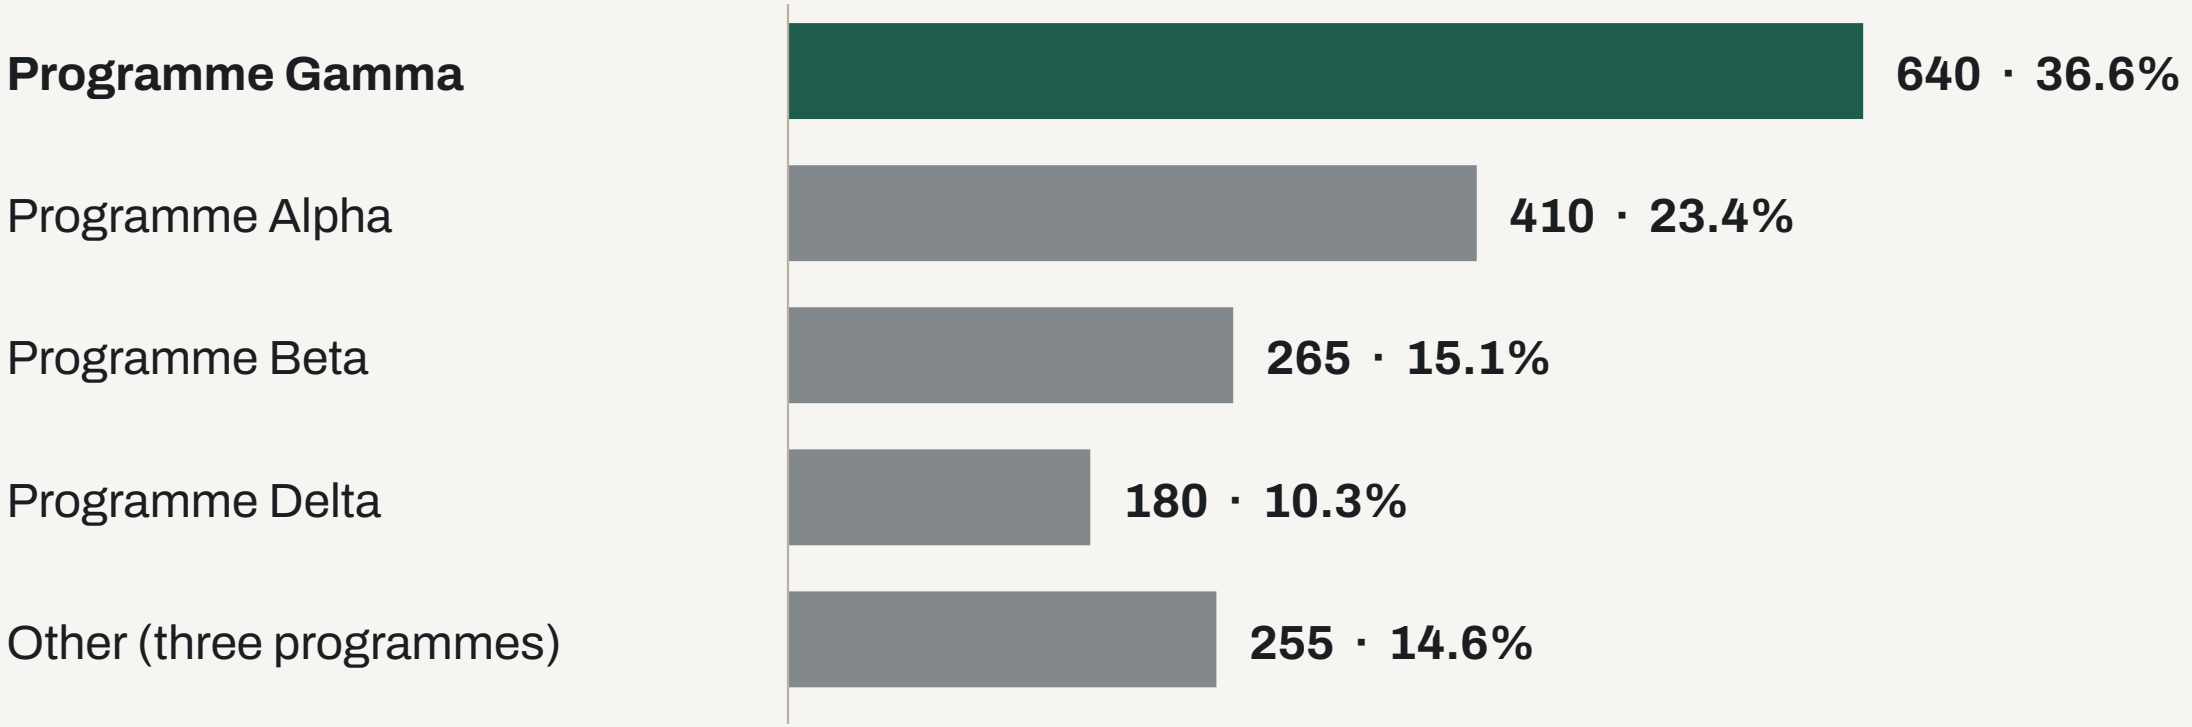

Not shown

Drawn amounts and operating status

Committed balances are one measure at one status; they are not drawn or operating amounts.

Gamma and Alpha carry 1,050 of 1,750 CU million

Committed balance by programme, CU million, demonstration cut-off

Bars start at zero. The aggregate row sums three programmes and is not one programme.

Source: synthetic fixture ranked-bar.json. Shares rounded to one decimal place. Not research.

A committed balance does not show drawdown or operation

Status ladder for the package; solid steps are evidenced, outlined steps are not

Committed	Drawn	Operating
1,750 CU million across seven programmes	Not reported in the fixture	Not verified in the fixture

The ladder states what is known at each step. It does not claim drawdown or production has occurred.

Source: synthetic fixture ranked-bar.json. The fixture reports commitments only. Not research.

One measure, one status, one cut-off, one labelled fixture

Method and evidence for this validation deck

Element	Treatment in this deck
Measure	Committed balance, CU million, as stated; never converted or combined with other statuses
Data	Synthetic fixture ranked-bar.json, constructed for the exhibit gallery
Treatment	Shares rounded to one decimal place; aggregate row sums three programmes
Limits	No drawdown, operating status, rationale or causal claim
Source	Strategic Materials Policy Tracker, methodology
