Programme Gamma holds the largest committed balance

Data	Synthetic demonstration fixture (currency unit CU, millions)
Prepared	11 November 2026
Status	Draft, not for publication

> **Programme Gamma carries 640 of the 1,750 CU million committed across seven synthetic programmes; Programme Alpha, the next largest, carries 410. This is a layout fixture and supports no finding about any real programme.**

What the exhibit shows

Committed balances are ranked on one measure and one status. Announced and drawn amounts are separate measures and are not combined with them.

Gamma and Alpha together account for 1,050 of 1,750 CU million, so the ranking is concentrated at the top. The remaining five programmes range from 40 to 265.

Committed balance by programme, CU million, demonstration cut-off

Programme	Committed	Share of total
Programme Gamma	640	36.6%
Programme Alpha	410	23.4%
Programme Beta	265	15.1%
Programme Delta	180	10.3%
Other (three programmes)	255	14.6%
Total	**1,750**	**100.0%**

Source: synthetic fixture ranked-bar.json, constructed for the exhibit gallery. Shares are rounded to one decimal place and sum to 100.0%.

What it does not show

- Disbursement or physical progress: a committed balance is not a drawn balance.
- Any government rationale. Rationale belongs in a separate, quoted record.
- Causation. A shared cut-off date does not show that one measure moved another.
